What is SOLID Principle? ByteByteGo

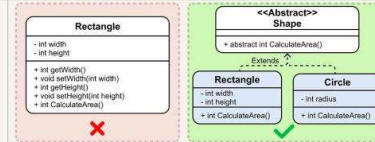

Single Responsibility Principle (SRP)

A class should have only one reason to change, meaning it should have a single, well-defined responsibility.

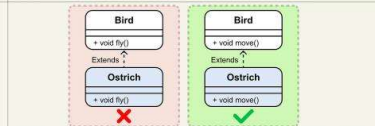

Open/Closed Principle (OCP)

Software entities (e.g., classes, modules) should be open for extension but closed for modification.

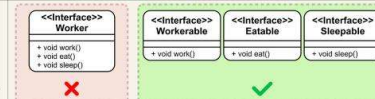

Liskov Substitution Principle (LSP)

Subtypes (derived classes) must be substitutable for their base types (parent classes) without altering the correctness of the program.

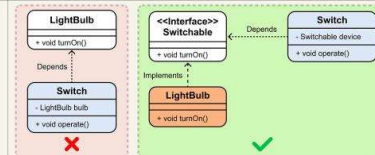

Interface Segregation Principle (ISP)

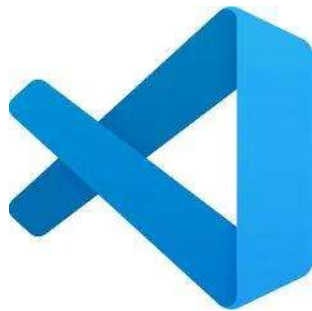

Clients should not be forced to depend on interfaces they don't use.

Dependency Inversion Principle (DIP)

High-level modules should not depend on low-level modules; both should depend on abstractions.

Problem Solving

PLAN – DO – CHECK – ACTION

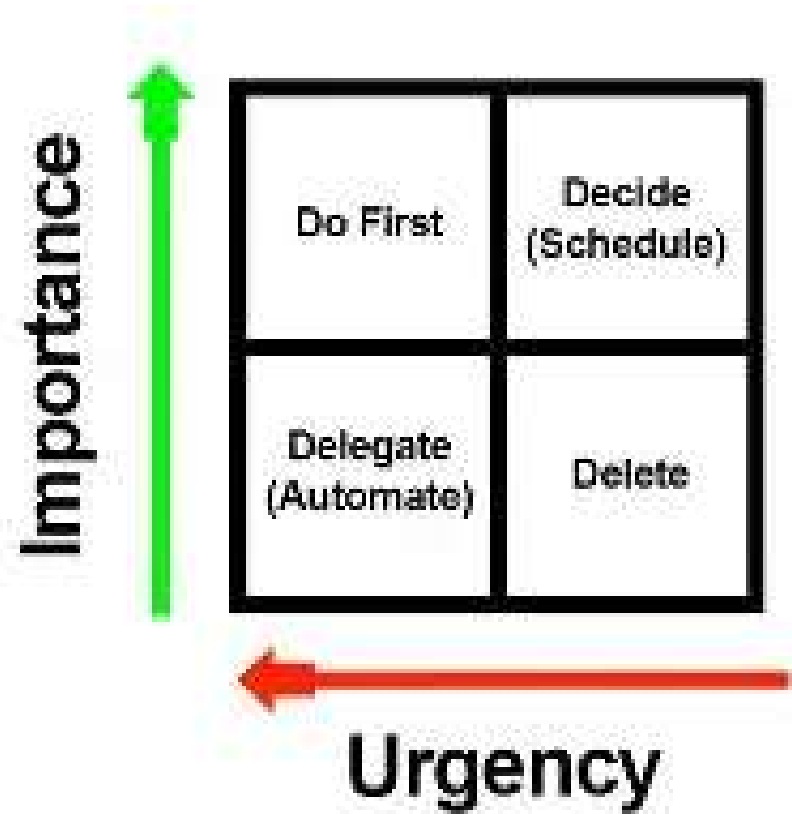

Plan: Develop a detailed action plan.
Do: Execute on a small scale.
Check: Monitor and evaluate.
Act: Implement on a larger scale or refine and repeat.

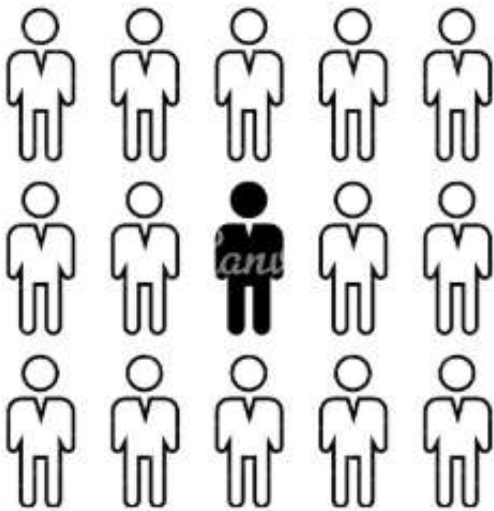

The Agile methodology is perfect for iterative execution, allowing us to adapt and refine our solution continuously.
